## EDUCATION

<b>Concordia University, Montreal</b> Master of Applied Computer Science	(September 2022 - Present)
<b>Gujarat Technological University</b> Bachelor of Computer Science	(July 2018 - May 2022)

## SKILLS

**Programming:** Python, Java, C/C++, Javascript, Typescript, Golang  
**FrameWorks / Operating Systems:** Flask, FastApi, Django, TensorFlow, PyTorch, Linux  
**Database Management:** InfluxDb, SQL(MySQL), NoSQL, MongoDB  
**DevOps:** Docker, Kubernetes, Kubeflow, Google Cloud Platform, Camunda, AWS  
**Other Tools:** Git, Postman, Jira

## EXPERIENCE

<b>Ericsson</b> Machine Learning Intern	(September 2023 - Present) <i>Montreal, Canada</i>
<ul style="list-style-type: none"><li>Implementing <b>Multi-Agent Framework</b> in <b>Python</b> and <b>Java</b>, as well as engineering Data Parsers and Database Schema to <b>optimize</b> 5G network efficiency and reduce query response time.</li><li>Integrating <b>Camunda</b> workflow to streamline processes and reduce operational bottlenecks.</li><li>Implemented and fine-tuned algorithms resulting in a <b>25% improvement</b> in predictive analytics accuracy, driving higher customer satisfaction and enabling data-driven decision making.</li><li><b>Participating</b> in daily stand-ups to provide updates on project progress, discuss challenges, and collaborate with senior developers. Actively contributing to design processes by gathering requirements and collaborating with the development team.</li></ul>	
<b>Orena Solutions</b> Software Developer Intern	(January 2022 - April 2022) <i>Vadodara, India</i>
<ul style="list-style-type: none"><li>Led a team of interns and spearheaded the development of several auxiliary projects for diverse services, employing a <b>3-layer architecture</b> in <b>Python with Flask</b>. I played a pivotal role in designing the <b>architecture, database schema, and REST APIs</b> for these initiatives.</li><li>Acquired proficiency across various <b>DevOps</b> domains, with a strong emphasis on <b>Kubernetes, Terraform, and AWS</b>, through extensive hands-on engagement.</li></ul>	

## PROJECTS

<b>Analysis of First Fit and CBIP Algorithms on Online Graph Coloring</b> ( <a href="#">github</a> ) <ul style="list-style-type: none"><li>Designed and developed a <b>React Application</b> to analyze and compare the performance of <b>algorithms</b> for <b>Online Graph Colouring</b>.</li><li>Executed <b>algorithms</b> in <b>JavaScript</b> to colour the nodes of an <b>online graph</b> as they arrive in <b>real-time</b>.</li><li>Conducted <b>experiments</b> to evaluate the efficiency of <b>algorithms</b> on different types of graphs, including <b>random, Erdős-Rényi, and scale-free graphs</b>.</li></ul>
<b>Kubeflow-GNN - Python, PyTorch, Kubeflow</b> ( <a href="#">github</a> ) <ul style="list-style-type: none"><li><b>Utilized SAGEConv</b> to perform <b>link property prediction</b> in <b>documents citation network data (ogbl-citation2)</b>, achieving an accuracy of <b>87.6%</b>.</li><li><b>Deployed GNN model Training</b> as <b>PytorchJob</b> in <b>Kubeflow</b>, which implements Pytorch training operator, resulting in a <b>20% reduction in training time</b>.</li><li><b>Implemented DDP (DistributedDataParallel)</b> for <b>Distributed Training</b> of the model, measuring accuracy and training time with <b>different epochs</b> (e.g., 50) and <b>number of workers</b> (e.g., 4), and observed a <b>12% increase in accuracy</b> with 4 workers.</li></ul>
<b>Blog Web App - Python, Flask</b> ( <a href="#">github</a> ) <ul style="list-style-type: none"><li>Utilized <b>Flask</b> framework to build the backend of the application, ensuring a lightweight and modular structure.</li><li>Employed HTML, CSS, and Jinja2 templating for creating a responsive and visually appealing user interface.</li><li>Integrated <b>PostgreSQL</b> as a relational database, achieving a <b>30% improvement</b> in data retrieval speed and ensuring efficient storage.</li></ul>
<b>BuyEase - Javascript, Node.js, React.js, WebSocket, MongoDB, HTML</b> ( <a href="#">github</a> ) <ul style="list-style-type: none"><li>Developed BuyEase, a user-friendly web application using <b>Node.js, Express, and JavaScript</b> for scalable server-side architecture, integrating <b>MongoDB</b> for efficient data management.</li><li>Enhanced user interactions by employing <b>React.js</b> in the front-end, leading to a <b>25% improvement</b> in overall satisfaction and engagement.</li><li>Implemented <b>WebSocket</b> for instant product, promotion, and order notifications, reducing update latency by <b>40%</b> for faster information dissemination.</li></ul>
<b>Online Book Store - Java, Bootstrap, Javascript, HTML, Mysql</b> ( <a href="#">github</a> ) <ul style="list-style-type: none"><li>Built a online bookstore with HTML, CSS, <b>JavaScript</b>, and <b>Bootstrap</b> on the front-end, and <b>Java</b>, Servlets on the back-end, ensuring a seamless user experience from browsing to checkout.</li><li>Enhanced administrative control using <b>MySQL</b> for real-time book management, achieving a 20% checkout time reduction through optimized queries and server-side processing.</li></ul>
